

Title

NEWFOUNDLAND AND LABRADOR NATIONAL FOREST INVENTORY PILOT PROGRAM

Model Forest

Western Newfoundland Model Forest

From

November 2000

To

October 2001

Keywords

CFIC, NFI, Treed Plots, Temporary Sample Plots, Permanent Sample Plots.

Objective

To pilot a project using the new National Forest Inventory guidelines in western Newfoundland. The new national inventory is a plot based system of permanent plots applied systematically across Canada that will provide information at the provincial and national levels.

Description

Implementation of the NFI in the province is a corporative approach between the DFRA and the CFS. WNMF had agreed to facilitate implementation.

The project from Nov 2000 through October 2001 revealed a number of problems with the proposed NFI strategy. Through this report, a number of revisions were made to the provincial NFI design to strengthen the overall program and its ability to meet all National reporting requirements.

Reports and Products

Newfoundland and Labrador National Forest Inventory Pilot Program. Lundrigan, Cyril.
July 2002. WNMF: 6-503-001, 6p.
