

Title

NEWFOUNDLAND RARE PLANT PROJECT

Model Forest

Western Newfoundland Model Forest

From

April 1999

To

March 2002

Keywords

Rare Vascular Plants, Newfoundland, Conservation, Species Of Concern

Objective

To support efforts towards conservation of rare plants, help in determining the status of plants throughout the province, and provide basic information for the preparation of status reports for species of concern.

Description

The project involved intensive, systematic botanical surveys. The occurrence, distribution, density of, and disturbance to vascular plant species were measured. In the first year of the project, focus was directed to unique limestone barren regions on the west coast. In the second year, work will continue on the west coast and may include work in the south and northeast coasts.
